

HONOR IN KNOT TYING

By Misheck Mwanza (Mishcool)

DEFINITION OF TERMS

Rope

A rope is a strong, thick cord made by twisting or braiding fibers together. Ropes are used for tying, pulling, lifting, securing loads, and rescue work in camping and outdoor activities.

Knot

A knot is a fastening made by tying a rope or cord with itself or to another rope in order to secure, bind, or stop movement.

Hitch

A hitch is a type of knot used to attach a rope to an object such as a pole, tree, ring, or post. It depends on tension and is easy to untie.

Bend

A bend is a knot used to join two ropes together, especially ropes of equal or different sizes.

PARTS OF A ROPE

1. Standing Part – The long, unused part of the rope that does not move while tying a knot.
2. Working End (Running End) – The short end of the rope used to tie the knot.

3. Bight – A curved section or loop formed in the rope without crossing the ends.
4. Loop – A complete circle formed when the rope crosses over itself.
5. Tail – The free end left after a knot is tied.

IMPORTANCE OF KNOT TYING

Used in camping and outdoor activities

Useful in rescue and first aid

Important for tent pitching

Helps in securing loads

Builds discipline and practical skills

TYPES OF KNOTS AND THEIR USES

1. Overhand Knot

Steps:

1. Form a loop in the rope.
2. Pass the working end through the loop.
3. Pull tight.

Uses:

Prevents rope from slipping through holes

Used as a stopper knot

First step in learning other knots

2. Reef Knot (Square Knot)

Steps:

1. Cross the right end over the left and tie.
2. Cross the left end over the right and tie.
3. Pull both ends evenly.

Uses:

Joining two ropes of equal size

Tying bandages in first aid

Securing bundles and parcels

3. Sheet Bend

Double Sheet Bend

Steps:

1. Form a bight with the thicker rope.
2. Pass the thinner rope through the bight.
3. Wrap it around both parts of the bight.
4. Tuck it under itself and tighten.

Uses:

Joining two ropes of unequal size

Useful in emergencies

Common in camping and sailing

Bowline Knot

101KNOTS

4. Bowline

Steps:

1. Make a small loop in the rope.
2. Pass the working end up through the loop.
3. Take it around the standing part.
4. Bring it back down through the loop.
5. Pull tight.

Uses:

Makes a fixed loop that does not slip

Used in rescue work

Securing rope around a person or object

5. Clove Hitch

Steps:

1. Wrap the rope around the pole.
2. Cross over itself.
3. Wrap around again and tuck under.

Uses:

Attaching rope to a post or pole

Temporary fastening

Starting point for lashings

6. Half Hitch

Uses:

Securing rope temporarily

Used with other knots for strength

Tying down loads

7. Two Half Hitches

Uses:

Securing rope to a pole or tree

Stronger than one half hitch

Camping and boating use

8. Timber Hitch

How to Tie a Timber Hitch

Uses:

Dragging logs or poles

Temporary holding knot

Easy to untie after use

9. Sheep Shank

Uses:

Shortening a rope

Isolating a damaged section of rope

Temporary use only

10. Fisherman's Knot

Fisherman's Knot Tying

Steps:

1. Overlap the two rope ends.
2. Tie an overhand knot with one rope around the other.
3. Repeat with the second rope.
4. Pull both standing parts to tighten.

Uses:

Joining two thin ropes or lines

Fishing and camping

Strong and reliable

11. Surgeon's Knot

Surgeon's Knot Tutorial

Note: A surgeon is a person trained to perform surgery (medical operations). Steps:

1. Cross the two ends of the rope.
2. Wrap one end around the other twice.
3. Pull tight.
4. Finish like a reef knot.

Uses:

First aid bandaging

Prevents slipping

Medical and rescue use

12. Fire Escape Knot

Steps:

1. Tie a series of overhand knots along the rope.
2. Space the knots evenly.
3. Ensure all knots are tight.

Uses:

Emergency escape from buildings

Provides grip when climbing down

13. Figure Eight Knot

Steps:

1. Form a loop in the rope.
2. Pass the working end around the standing part.
3. Bring it back through the loop.
4. Tighten neatly.

Uses:

Strong stopper knot

Climbing and rescue work

Prevents rope from slipping

14. Slip Knot

Steps:

1. Make a loop in the rope.

2. Pass a bight through the loop.

3. Pull to adjust.

Uses:

Adjustable loop

Temporary fastening

Easy to untie

15. Honder Knot (Hunter's Knot)

Note: The Honder Knot is commonly known as the Hunter's Knot.

Steps:

1. Overlap the two rope ends.

2. Tie a simple overhand knot with each end around the other.

3. Pull both standing parts to tighten.

Uses:

Joining two ropes securely

Stronger than a reef knot

Useful in camping and outdoor activities

KNOTS USED IN FIRST AID

Reef Knot – Tying bandages and slings

Clove Hitch – Securing splints

Bowline – Rescue and lifting a casualty

Sheet Bend – Joining bandages or ropes in emergencies

CARE OF ROPES

Keep ropes dry

Store neatly

Avoid sharp edges

Do not overload

CONCLUSION

Knot tying is an important outdoor skill. Knowing the correct knot and its use helps Pathfinders work safely, efficiently, and confidently during camping and service activities.

REVIEW QUESTIONS

1. What is a knot?
2. Define a hitch.
3. What is a bend?
4. State three uses of knot tying.
5. Name five knots and their uses.
6. Which knot is best for rescue work?
7. Which knot is used to join unequal ropes?
